State adds three counties to special deer surveillance zone

BY TOM LATEK KENTUCKY TODAY

New Chronic Wasting Disease surveillance measures are in effect for Henderson, Union and Webster counties, following the detection of CWD in a deer harvested just across the Ohio River in Posey County, Indiana.

In response, the Kentucky Fish and Wildlife Commission approved a CWD Surveillance Zone for the three counties, expanding the state's existing surveillance area,

which includes Ballard, Breckinridge, Calloway, Carlisle, Fulton, Graves, Hardin, Hickman, Marshall, Meade and McCracken counties.

The zone establishes specific regulations to help limit the spread of the disease among deer including:

-Mandatory testing. Hunters in Henderson, Union and Webster counties must bring deer harvested during the first three days of modern gun season Nov. 8–10 to a staffed check station or CWD Sample Drop-Off site for testing.

-Carcass transport limits. Whole

carcasses or high-risk parts from elk and other animals in the deer Wildlife has CWD-tested more than deer harvested in the zone cannot leave the three counties. Permitted items for transport include de-boned meat, clean skulls and teeth, antlers (with or without a clean skull cap), hides and finished taxidermy mounts. Carcasses of deer harvested outside the zone may be brought in.

--Rehabilitation ban. The rehabilitation of deer is prohibited within the surveillance zone.

Chronic Wasting Disease is caused by abnormal proteins called prions and affects white-tailed deer,

fatal in infected animals.

The disease is not known to be transmissible to people, but as a precaution the Centers for Disease Control and Prevention recommends not consuming meat from deer that test positive for the disease.

Kentucky Fish and Wildlife always recommends not consuming meat taken from animals that appear to be sick or in poor condition.

Since 2002, Kentucky Fish and fw.ky.gov/cwd.

family. There is no known cure or 60,000 deer and elk from across vaccine and the disease is always the state. Hunters all across the state are encouraged to submit samples through CWD Sample Drop-Off sites or CWD Sample Mailin Kits at any time during the hunting season. The test comes at no monetary cost to the hunter, and results are typically returned within four to six weeks.

Report: Childhood trauma costs Kentucky nearly \$300M every year

BY SARAH LADD KENTUCKY LANTERN

Adverse experiences in childhood and their lasting consequences cost Kentucky nearly \$300 million a year, a new report says.

Kentucky Youth Advocates and Bloom Kentucky, a KYA initiative focused on reducing childhood adversity, released an analysis, called "The Economic Impact of Adverse Childhood Experiences in Kentucky" that shows health care costs and loss of workforce participation as a result of childhood trauma comes with a \$295 million annual price tag.

The analysis is based on Behavioral Risk Factor Surveillance Survey data from 2015–20. At that time, 62% of Kentucky adults said they'd had at least one adverse childhood experience or ACE and 19% reported four or more.

ACEs are traumas or stressors in a person's life before their 18th birthday. They include, but are not limited to, parental divorce, abuse, parental incarceration, substance use issues in the home and other instances. The more ACEs a person has, the more likely they are to have poor health, lower education and economic hardships.

become chronic, it "has an impact on our physiology," said Shannon Moody, Kentucky Youth Advocates' chief officer of strategic absorbing the costs through work. initiatives The more ACEs a person has, the more likely they are to turn to unhealthy practices such as smoking, according to the Centers for Disease Control and Prevention. ACEs survivors also tend to report poorer mental health, might be unemployed and are more likely to have chronic health issues such as diabetes and

cancer, according to the CDC. issues in their childhood "The ways that our body home.

absorbs stress or deals with stress has an impact on our physiology as well as on our mental health," Moody said. "When that stress goes unaddressed in our bodies, it starts to take a toll on how our bodies' function.'

The result is sicker people who might not be able to work and contribute to the economy.

When these stressors making sure that kids can overcome the adversity that they are (facing) — or maybe our state budget," Moody said.

 ACEs cost Kentucky – both in medical spending and in lost income when people cannot work — nearly \$300 million each year. Among these, smoking costs more than \$107 million each year in lost wages.

• Depression costs the state the most in treatment expenses at \$728,000 annually.

• Kentucky has higher "If we don't invest in expenses per person in treating ACEs than most of its neighboring states.

• People with at least one ACE are more likely to be we're going to end up unable to work or be out of

Non-white Kentuckians

the report says. "Understanding the widespread impact of trauma begins with learning both its effects and the potential pathways to healing.'

That includes creating better access to quality child care, Moody said, and creating a state child tax credit. Combating poverty, which affects 20% of Kentucky's children and for many means they don't have reliable sources of nutritious food, is key as well.

She also stressed the importance of positive childhood experiences (PCEs), which can balance children's adverse experiences. PCEs can include feeling supported by friends, having adults who care, the ability to talk with family members about feelings and more.

"Even if a child is experiencing adversity, even if they have an ACE score of 7, or they have had just a really tough environment in which they were raised, we can counterbalance those adversities with positive childhood experiences," Moody said.

WHY NOW?

The report is coming out now, Moody said, because work on the 2026 state budget is beginning and because proposed federal funding cuts to safety net programs such as Medicaid and SNAP put people at risk of more instability and more adverse childhood experiences.

The report is a call to action she said, to invest in child wellbeing and prevent ACEs.

Researchers study charter school amid pandemic

BY AMANDA NELSON UNIVERSITY OF KENTUCKY

Researchers determined that students in Tennessee charter schools fared better academically during and after the COVID-19 pandemic.

Tennessee has more than 100 charter schools, serving 4.4% of the state's students. Most of the state's charter schools are in two large urban areas, Nashville and Memphis, both of which include schools authorized by the local district and the state.

The analysis was conducted by Adam Kho, Ph.D., assistant professor in the University of Kentucky College of **Education Department of Educational Policy Studies** and Evaluation; Ron Zimmer, Ph.D., professor and director of the UK Martin School of Public Policy and Administration; and Shelby Smith, a University of Southern California doctoral candidate.

They found both groups of students performed similarly during the pandemic. However, in the years following, charter school students outperformed similar traditional public school peers.

Zimmer noted that previous research on the impact of school choice policies has vielded mixed results regarding the effectiveness

ADVERTISEMENT FOR BIDS line Replacement" for the City of Campbellsville will be received until 1:30 p.m. (local time) on June 26, 2025, and then publicly opened and read aloud

of charter schools. "Nearly all

that research was conducted before the pandemic, leaving a gap in understanding how charter schools adapted and performed during and after that period," Zimmer said. "Our findings provide new insights into the performance of charter schools during and after the pandemic."

Given the widespread learning loss experienced by students nationwide during the pandemic, the researchers believe their study can serve as a springboard for highlighting valuable lessons from the charter sector — with particular attention given to examining what post-pandemic learning looked like in charter schools located in the broader Nashville region.

"Further research is needed to examine specific practices of high-performing charter schools post-pandemic," Kho said. 'Understanding what drove these results could inform strategies for improving student outcomes broadly, which we hope to do in upcoming work."

The detailed findings are posted at bit.ly/charter-covid.

WHAT'S IN THE REPORT?

According to the analysis: • The most common type

of ACEs in Kentucky is divorce with 32% of adults reporting they lived through their parents splitting when they were children. A close second, 31% of adults reported there were substance abuse

are more likely to have experienced ACEs than their white counterparts. Multiracial Kentuckians have the highest rates of ACEs.

"Given how common ACEs are in Kentucky, organizations, agencies and decisionmakers must take trauma into account when working to strengthen communities,"

"We need to get an understanding among all of our decision makers as far as what the implications of childhood adversity mean for our bottom line," Moody said, "and for the investments that they're making right now on behalf of kids."

EMPLOYMENT OPPORTUNITY

The Lebanon Enterprise newspaper in Lebanon, KY, is seeking a FULL-TIME REPORTER/PHOTOGRAPHER.

Applicants need to be able to write well-written, interesting, accurate, informative, and timely sports, feature, general news, and hard news stories as assigned. Photograph and process images on deadline that work with written text to illustrate news, sports or feature stories for print and online editions of the newspaper.

QUALIFICATIONS:

- College degree in journalism, English, related field or equivalent experience
- Understanding of journalistic ethics and legal/libel knowledge is helpful
- · Effective organizational and time management skills
- · Ability to work on tight deadlines
- Good communication skills
- Initiative to pursue news/feature/photo opportunities
- Sharp sense for news photography; keen eye for photos, strong sense of ethics.
- Ability to write effective, accurate cutlines.
- Proven adaptability and initiative.

ESSENTIAL FUNCTIONS:

- · Cover assigned beats and breaking news with timely stories and photos.
- · Taking photos and editing them with Adobe Photoshop and offering ideas for page design and performing page design using pagination software.
- Contribute photo ideas daily.
- · Develop photo-story projects.
- Participate in news budget meetings, and project planning meetings.
- Process photos for publication using PhotoShop.
- Write effective, accurate cutlines

Interested individuals should send their cover letter and resume' to bsheroan@paxtonmedia.com

Paxton Media Group is an Equal Opportunity Employer

The scope of work includes the installation of approximately 10,256 LF of 24-inch DI aw waterline, 50 LF of 48inch steel casing pipe, 7 air re lease valve assemblies, and related appurtenances.
